MARKET REVIEW

Sugar deliveries by primary distributors for consumption in the U.S. is off to a very slow start this year. Preliminary reports show that 520,000 short tons, raw value, were delivered in January. This was the lowest reported deliveries for January since 1954 and compares with 957,000 tons delivered in January last year.

Deliveries for the week ending Feb. 15 totaled 134,000 tons which was 38 percent less than sugar deliveries for the same week a year earlier. Total deliveries in 1975 through Feb. 15 amounted to 769,000 tons. However, at year-end 1974 there were 8,000 tons of sugar constructively delivered, i.e., sugar sold and charged to quotas during December 1974, but physically delivered in January and February of 1975. If it is assumed that all of the constructive deliveries have been made, physical deliveries in 1975 through Feb. 15 would total 777,000 tons compared with 1,392,000 tons delivered during the same period last year.

Deliveries of refined sugar by states of destination during calendar year 1974 totaled 211,000,000 hundredweight which was a decrease of 2.1 percent from 1973. Decreases were reported in four of the five geographical regions. The West, which was the only region to show an increase, was up 2.5 percent from 1973. New England showed the greatest decrease - 5.6 percent - followed by the Mid-Atlantic down 4.6 percent, the South down 3.2 percent and the North Central down 1.5 percent.

There were 16 states that received more refined sugar in 1974 than in 1973 and 34 states that received less. There were four states in which 1974 receipts increased more than 100,000 hundredweight and 21 in which receipts were down more than 100,000 hundredweight. Of those states where receipts increased, Illinois had the largest increase -- 767,000 hundredweight, followed by California up 699,000, Delaware up 310,000 and Maryland up 148,000. Pennsylvania, New York and Indiana showed the largest declines, down 802,000, 615,000 and 543,000 hundredweight, respectively.

During 1974, cane sugar refineries delivered 72.2 percent of the total refined sugar deliveries compared with 68.1 percent during 1973, while beet sugar processors delivered 26.8 percent of the total compared with 30.5 percent in 1973.

Low distribution figures are reflected by high stocks. Inventories of raw and refined sugar reported on hand by all primary distributors on Feb. 1, 1975, totaled 2,911,000 tons, raw value, according to preliminary reports. This was 74,000 tons more than on Dec. 31, 1974 and 423,000 tons more than on Jan. 31, 1974.

Cane sugar refiners were able to reduce their stocks by slowing down their processing operations during January. However, some refiners reached a point where a shutdown of the refining operation was necessary for a short time during January or early February. As a result of the slow down, refiners' stocks were reduced 252,000 tons during January, from 1,223,000 tons on Dec. 31, 1974 to 971,000 tons on Feb. 1, 1975. Of the 252,000 ton reduction, 238,000 tons were from raw sugar stocks and 14,000 tons were from refined stocks.

The stocks of mainland cane processors and beet processors on Feb. 1, 1975 increased 326,000 tons over the Dec. 31, 1974 stocks. Mainland cane processors' stocks increased from 207,000 tons at the end of December to 325,000 tons on the first of February, and beet processors' stocks moved from 1,406,000 tons on Dec. 31, to 1,614,000 tons on Feb. 1.

The spot quotation for raw sugar, duty paid and delivered to New York (No. 10 bulk contract of the New York Coffee and Sugar Exchange) averaged 40.15 cents per pound during January, down from 46.74 cents in December but up 218 percent from 12.63 cents in January of last year.

During the first three weeks of February, the spot price was mixed, hovering in the range of 36.00 to 38.75 cents. The Feb. 3-21 average was 37.52 cents compared with 16.13 cents for the same period last year. For the period under review, the spot price has, for the most part, been set "on tone" each day with very few actual sales taking place.

The spot price for world bulk raw sugar (No. 11 Contract of the New York Coffee and Sugar Exchange), f.o.b. and stowed at Greater Caribbean ports, averaged 38.32 cents per pound during January, down from 44.97 cents in December. The January average price was a 150 percent increase from the January 1974 average of 15.32 cents.

The world price was set at 33.25 cents on Feb. 3 and climbed to 37.00 on Feb. 11. The price then started to decline and was down to 33.75 cents on Feb. 21. For the period Feb. 3-21, the world price averaged 35.19 cents compared with 20.45 cents for the same period last year.

During the period under review, the wholesale price quotations for refined cane sugar sold in 100-pound bags were unchanged except in the Pacific Coast and Intermountain Northwest regions. Sellers of refined cane and beet sugar announced price changes in these regions effective Feb. 3. In the Pacific Coast region, the price for 100-pound bags was reduced 2.00 cents per pound from 44.35 cents to 42.35 cents.

The quoted price of 46.35 cents was reduced to 43.55 cents in the Intermountain Northwest region for a decrease of 2.80 cents per pound. On Feb. 19 beet sugar refiners reduced their price to 41.55 cents in their Eastern, Chicago-West and Intermountain Northwest regions.

Shown below are the price quotations on Feb. 21, 1975, for refined sugar sold at wholesale in 100-pound bags and in bulk, by regions. Significant variations of actual price from the quoted price may be found in certain regions, reflecting competitive discounts.

<u>Region</u>	<u>PRICE QUOTATION IN CENTS PER POUND</u>

The U.S. average retail price for refined sugar sold in 5-pound paper bags averaged 60.02 cents in January, down from 62.76 cents in December but up from 16.98 cents in January of last year for an increase of 253 percent for the 12-month period.

Production of cane sugar in Florida through Feb. 21, 1975 amounted to 542,000 tons, raw value, with roughly 63 percent of the crops harvested and processed. Production from the current crop is now estimated at about 856,000, tons, compared with 824,000 tons produced last year.

The 1974 crop sugarcane harvest in Louisiana has been completed and while all final reports are not yet in, indications are that production will amount to about 594,000 tons, raw value, compared to 558,000 tons produced last year.

Cane sugar production in Texas through Feb. 17, 1975 amounted to about 49,000 tons with total production estimated at roughly 88,000 tons. This is the second crop to be harvested from the new Texas cane area and both crops were plagued with a freeze. The 1973-74 crop produced 38,000 tons of sugar.

Production of raw sugar, 96<sup>0</sup>, in Hawaii during the first five weeks of 1975 totaled 14,211 tons. This was 32 percent less than the 5-year average production for the same period and compares with 13,681 tons produced through Feb. 21, 1974.

- 1/ Spot prices are for bulk sugar under Contract No. 10, duty paid or duty free, full duty rate .625 cent per pound.
- 2/ Spot prices are for bulk sugar under Contract No. 11, which beginning on Jan. 1, 1971 replaced Contract No. 8. The terms of these contracts are f.o.b. and stowed at Greater Caribbean ports including Brazil.
- 3/ The No. 10 "Domestic bulk" contract has been adjusted by deducting duty (.625¢) computed freight from the Greater Caribbean ports (including Brazil), insurance and unloading charges before calculating the differential from the "World Contract" spot prices.
- 4/ These are basis prices in 100-pound paper bags, NOT delivered prices. To obtain delivered prices, add "Freight Prepays" and deduct discounts and allowances. For illustration see Sugar Reports No. 230, July 1971, pages 6 to 23.

Domestic Sugarbeet Area, 1972 and 1973 crops.

## A. Beet Sugar production, United States 1/ (Table 3)

Crop Year	Refined 1,000 cwts.	Raw value equivalent 1,000 tons
1972	67,895	3,632
1973	60,107	3,216

1/ Gross production, excludes adjustment for losses of sugar from hauling, storage, conversion to liquid sugar, etc., prior to marketing

## B. Number of beet sugar factories in existence and operating 1/ (Table 4)

Year	In existence	Operating
1972	61	54
1973	61(e)	53

1/ One factory beginning 1926 produces sugar from beet molasses but not directly from beets.

## C. Farms, acreage, production and yield, U.S. sugarbeet area (Table 5)
